

# Assembler Language Programming – Intermediate

---

<b>Duration</b>	5 days
<b>Participants</b>	This course is for application and systems programmers that need to use intermediate level language facilities when using the IBM High Level Assembler.
<b>Objectives</b>	Upon successful completion of this course, you will be able to: <ul style="list-style-type: none"><li>• Utilize Boolean logic and logical operations.</li><li>• Use advanced data manipulation instructions.</li><li>• Transfer control to other programs via CALL, LOAD, and LINK macros.</li><li>• Acquire and use additional memory via GETMAIN services and DSECTS.</li><li>• Read and write VSAM KSDSs (key-sequenced datasets).</li><li>• Code, assemble and linkedit assembler programs utilizing 31-bit addressing.</li><li>• Code, assemble and linkedit reentrant and reusable programs.</li><li>• Use system provided macros and system variables.</li><li>• Write assembler macros using the macro language, including MACRO, MEND, MEXIT, MNOTE, AGO, AIG, AIF, ANOP, etc.</li></ul>
<b>Format</b>	Lecture and hands-on workshops.
<b>Prerequisites</b>	Courses in Introduction to z/ OS, TSO/ ISPF, Basic MVS JCL, and Basic Assembler Programming, or equivalent experience.
<b>Overview</b>	This course teaches participants how to use the intermediate techniques available when programming HLASM (IBM's High Level Assembler).
<b>Topic Outline</b>	<b>Logical Instructions, Bit Manipulation, and Testing</b> <ul style="list-style-type: none"><li>Bit Manipulation</li><li>AND</li><li>OR</li><li>XOR - EXCLUSIVE OR</li><li>TM – Test Under Mask</li><li>Branching After TM</li><li>IC - Insert Character</li><li>STC - Store Character</li></ul> <b>Advanced Data Manipulation Instructions</b> <ul style="list-style-type: none"><li>ICM – Insert (LOAD) Characters Under Mask</li><li>STCM – Store Characters Under Mask</li><li>CLM – Compare Logical Characters Under Mask</li><li>EX – Execute</li><li>MVCL – Move Characters Long</li><li>MVCL Tips</li><li>CLCL – Compare Logical Characters Long</li><li>MVO – Move with Offset</li></ul>

# Assembler Language Programming – Intermediate *(continued)*

---

## Topic Outline

### System Macros

- TIME
- Extracting Month from TIME Macros
- SNAP
- ABEND Macro
- WTO
- WTOR Macro
- WAIT Macro
- DOM Macro
- Above the Line, Below the Line, the Bar
- Memory Types
- Virtual Storage Management
- VS Memory Management
- Subpools
- GETMAIN Macro
- FREEMAIN Macro

### Using VSAM Datasets

- VSAM File Organization
- KSDS
- VSAM KSDS Example
- IDCAMS Utility
- IDCAMS – CREATE KSDS
- IDCAMS – Load and Print KSDS
- VSAM Macros – Building Control Blocks
- VSAM Macro – Assessing Control Blocks
- VSAM Macros – Data and Requests
- ACB Macro
- RPL Macro
- VSAM Macro Connections
- ACB Options
- RPL Options
- OPEN Macro
- CLOSE Macro
- GET, PUT, ERASE Macros
- Some Macro Combinations
- EXLST Macro
- SHOWCB Macro
- GET Move Mode vs. Locate Mode
- Example of VSAM Update

### Subroutines and Addressing

- Eye Catchers
- Linkage Instructions
- BAL/ R vs. BAS/ R
- Modular Code – Internal Subroutines
- Invoking an External Subroutine
- Static vs. Dynamic Calls
- Preserving Registers
- Save Areas
- LTR and R15

# Assembler Language Programming – Intermediate *(continued)*

---

## Topic Outline

### Subroutines and Addressing *(continued)*

- Link
- Parameter Passing Using Register 1
- LINK, LTR, WTO Example
- DSECTS with I/ O
- Parms from JCL Example
- Dynamic Calls
- Call
- Static Call – Linkage Editor and GO
- LOAD, CALL DELETE
- 24-bit vs. 31-bit Addressing
- LOAD
- CALL
- CALL – List Form
- CALL – Execute Form
- DELETE
- ENTRY and EXTERN

### Reentrant / Serially Reusable Programs

- Concepts
- Reentrant
- JCL Parms
- How to Code Reentrant

### Writing User Macros and Assembler Instructions

- Assembler Instructions
- Macro
- Defining a Macro
- Comment on Prototype Statement
- Macro Prototype Statement
- MYADD – Macro ADD Example
- Keyword Parameters
- Local and Global Symbols in Macros
- LCLx and GBLx Example
- SETx Example
- SETA
- SETB
- SETC
- Macro Statements - Overview
- AIF and AGO
- EQUIREGS Macro Example
- Concatenation
- FMOVE Macro
- CMOVE Macro
- &SYSNDX – Local System Symbolic Variable
- Parameter Sublists
- FADDER Macro Example
- Storage Attributes
- CNOP
- System Variables
